NET WT 1 GALLON (10.1 LBS)

Antler Boost SOIL BOOST™ is a one-of-a-kind complete plot fertilizer for your food plots and fruit/nut trees. SOIL BOOST is highly effective at helping your soil feed your food plot. SOIL BOOST is not a simple water soluble synthetic fertilizer like you see in liquid fertilizer products that are not complete. The natural ingredients that make up 89% of SOIL BOOST are what boost your soil and makes your plants grow all season long.

APPLICATION RATE: 1 gallon of SOIL BOOST per 1/2 half acre mixed with a minimum of 12 gallons of water. If you are using a common 4 gallon backpack sprayer, fill it halfway with water and then add 1/3 of a gallon jug of SOIL BOOST and then fill sprayer full with water. Fertilize 1/3 of your half acre plot. Then repeat 2 more times to completely cover the 1/2 acre plot. With ag sprayer use 12:1 ratio per 1/2 acre. Use the same ratio to apply to your shrubs, lawn, and trees. **SHAKE WELL BEFORE USING!**

pH GUIDELINES: if your pH is 5.6 or above you will normally need 1 application per growing season unless you observe leaching (normally seen as leaf yellowing) from super heavy rainfalls. If you observe leaching or have a pH below 5.6, we recommend applying 2 or more applications of SOIL BOOST per growing season. Perennial crops like clover, chicory, alfalfa have 2 growing seasons per year.
